Part I Introduction

Part II Standard Model Physics

Part III Higgs

- SM higgs:
 - what do we know ?
 - production and decay
 - detection
- extended higgs models

Part IV New Phenomena

References

The SM Higgs

Known (if exists):

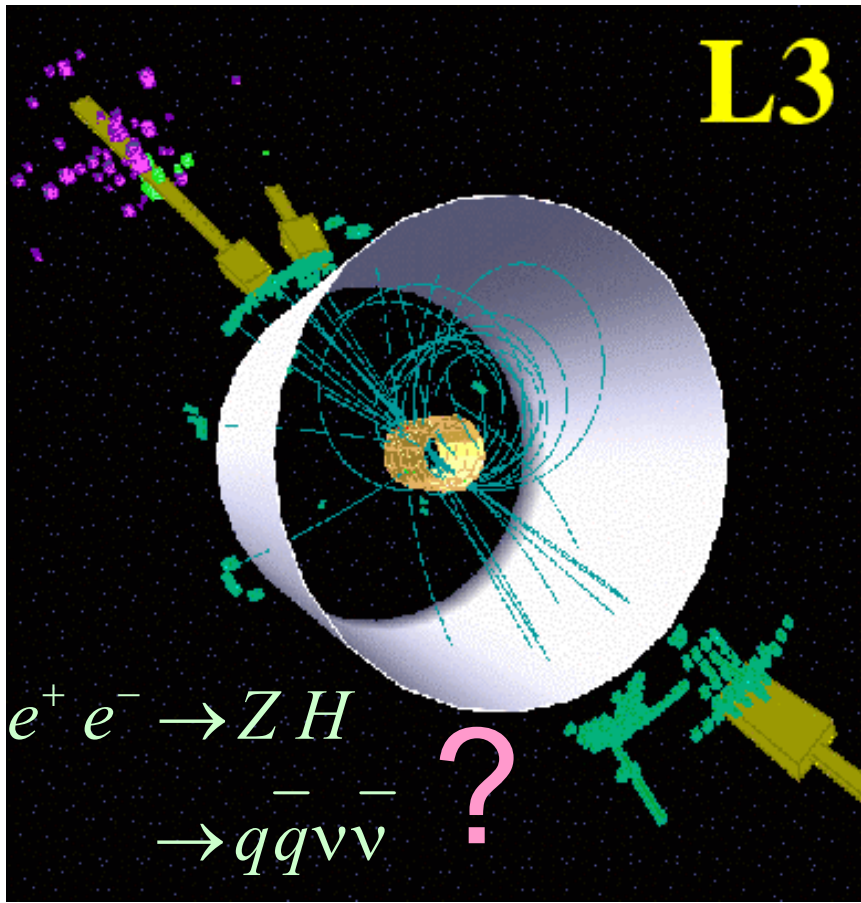

- couples to mass (!): bosons and fermions
- scalar, no elm. or strong interactions
- properties calculable as a function of m_H
- LEP: $114 \text{ GeV} < m_H < 219 \text{ GeV}$ (95%)

To be explored:

- existence ? produce and detect !
- properties ? precise measurements $\rightarrow e^+ e^-$ collider

Historical reminiscence: LEP and Higgs

direct indirect

$m_H > 114 GeV$ (95%)

(LEP)

$m_H < 219 GeV$ (95%)

(LEP, SLD, Tevatron, NuTeV...)

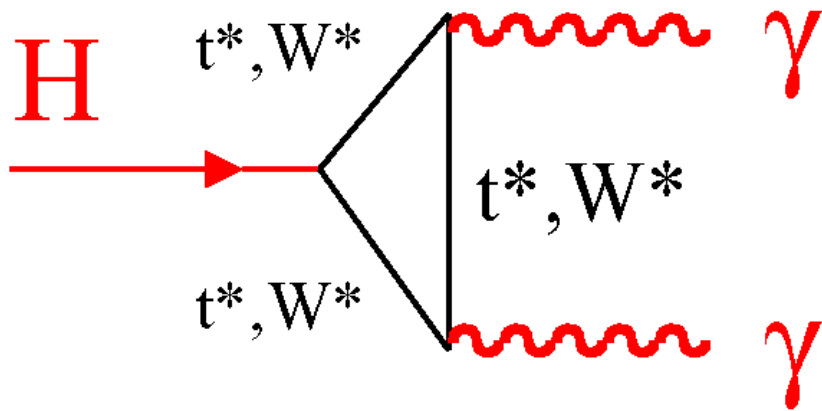

Higgs Decay Modes

$$\Gamma(H \rightarrow VV) \rightarrow G_F m_H^3$$

$$\Gamma(H \rightarrow f \bar{f}) \rightarrow G_F m_f^2 m_H$$

$$\Gamma(H \rightarrow \gamma\gamma) \rightarrow \alpha^2 G_F m_H^3$$

Higgs Branching Fractions

Higgs Decay Width

$$\Gamma \sim m_H^3$$

Important for
Signal/background!

Higgs production in pp

Xsection largest

$H \rightarrow \gamma \gamma, (leptons)$

Xsection small

photons, leptons:

- less background
- mass resolution !

Xsection „large“ at 2 TeV

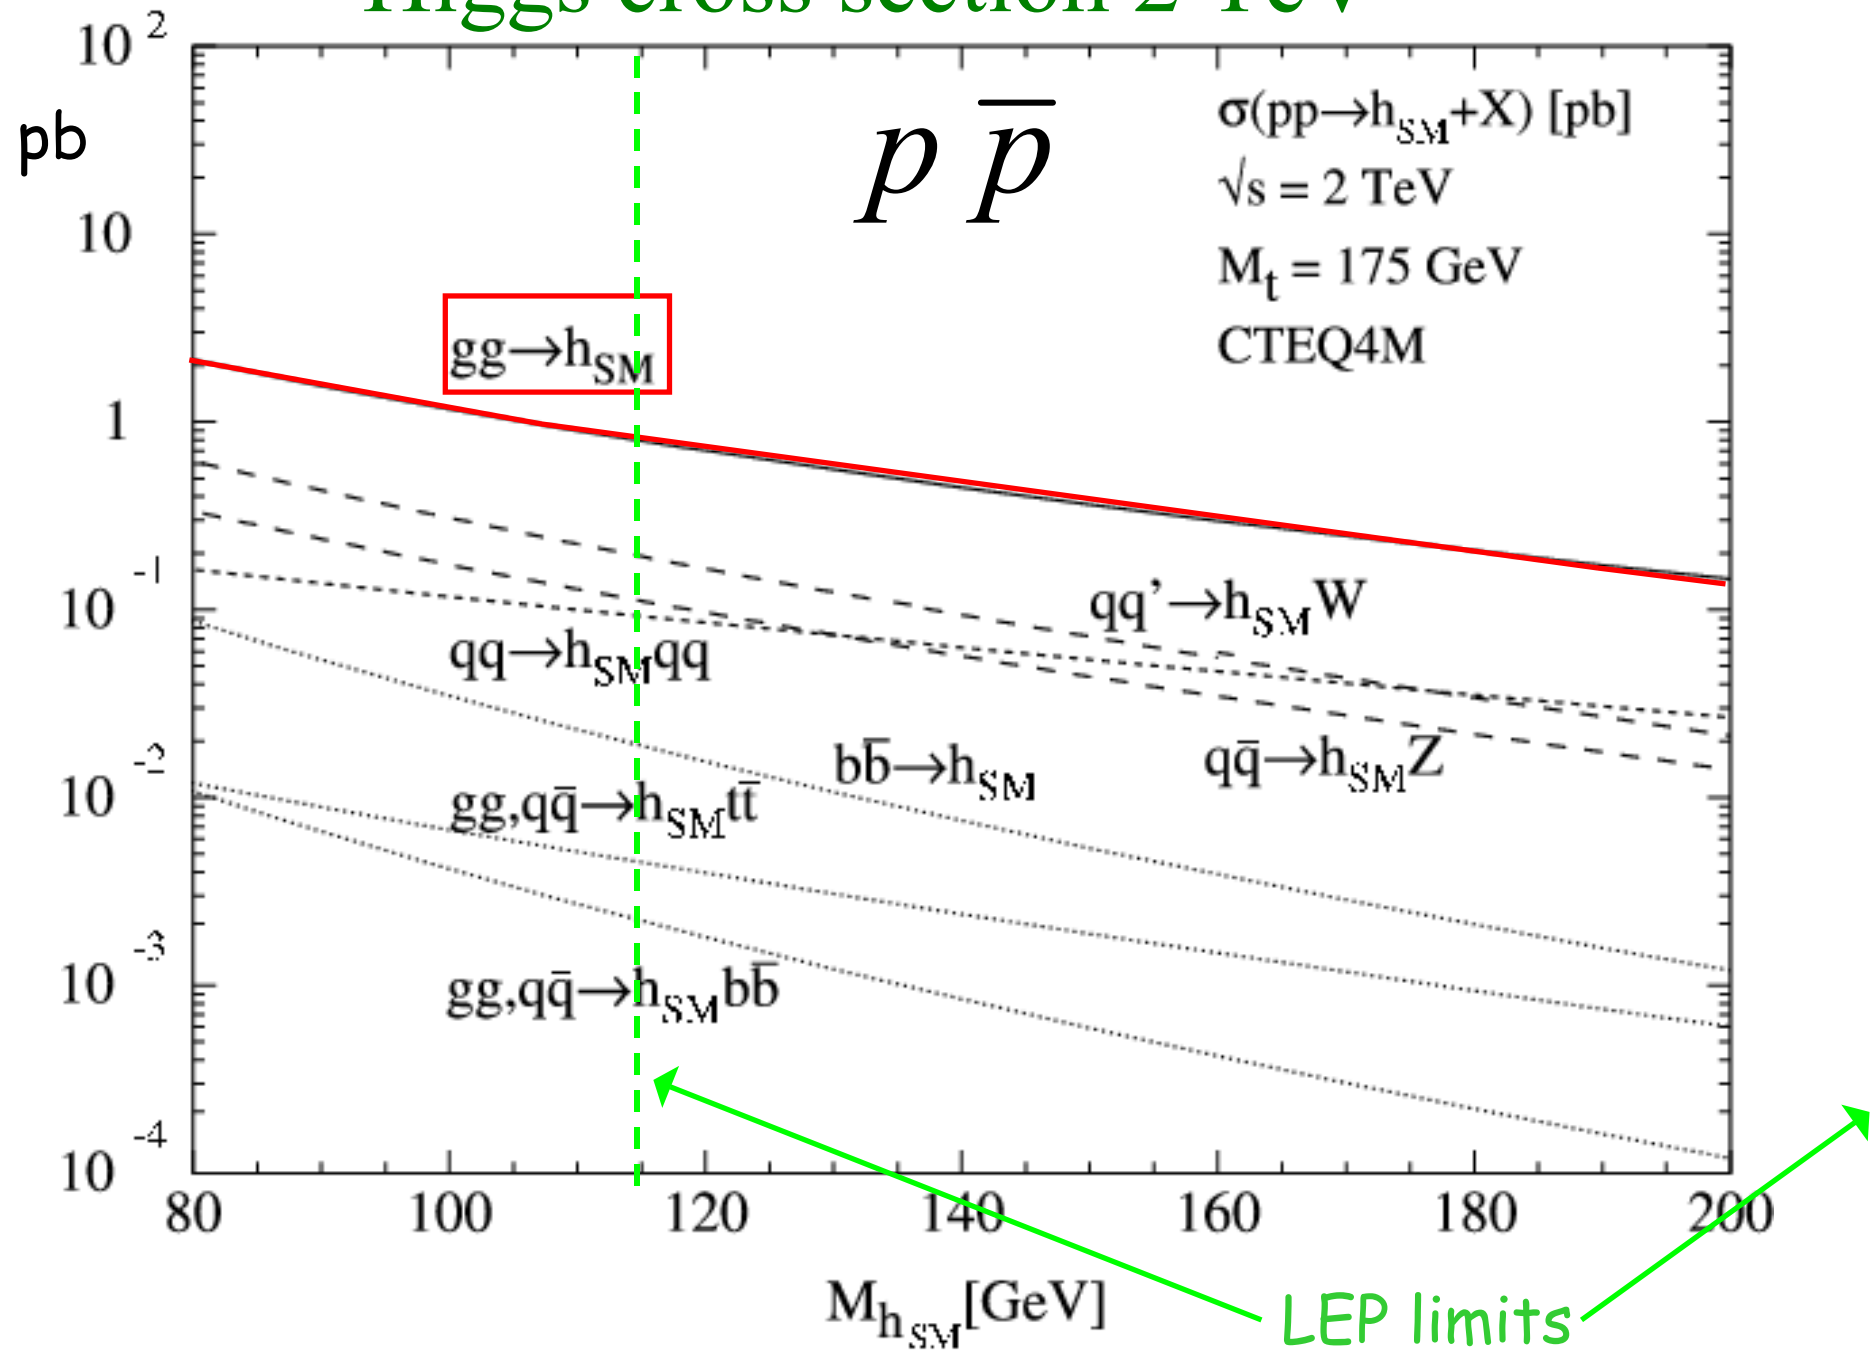

$W, Z \rightarrow leptons$

Xsection „large“ at 14 TeV

$H \rightarrow \gamma \gamma, (leptons)$

Higgs cross section 2 TeV

Higgs cross section 14 TeV

Higgs search strategies

Tevatron
2 TeV

LHC
14 TeV

LEP limits

Higgs (130-190 GeV) $\rightarrow WW$ [2 TeV]

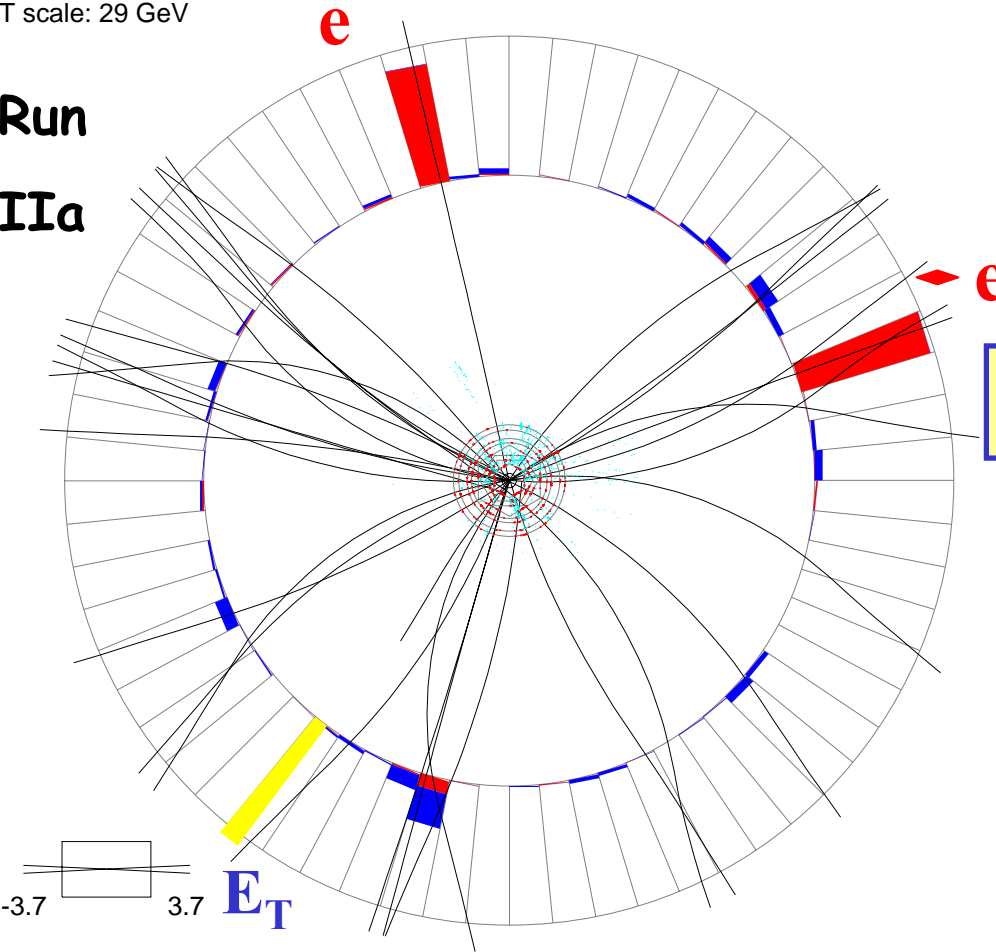

Run 169236 Event 4468684 Thu Feb 13 02:26:58 2003

ET scale: 29 GeV

Run

IIa

$$H \rightarrow WW^{(*)} \rightarrow e^+e^- \nu \bar{\nu}$$

D0

Run 169236 Event 4468684 Thu Feb 13 02:26:57 2003

Bins: 170
 Mean: 0.594
 Rms: 2.66
 Min: 0.00933
 Max: 25

mE_t: 31.2
 phi_t: 232 deg

Background: $WW^{(*)}, Z\gamma^{(*)}, tt$

Higgs (110-150 GeV) $\rightarrow \gamma\gamma$ [14 TeV]

CMS

Background:

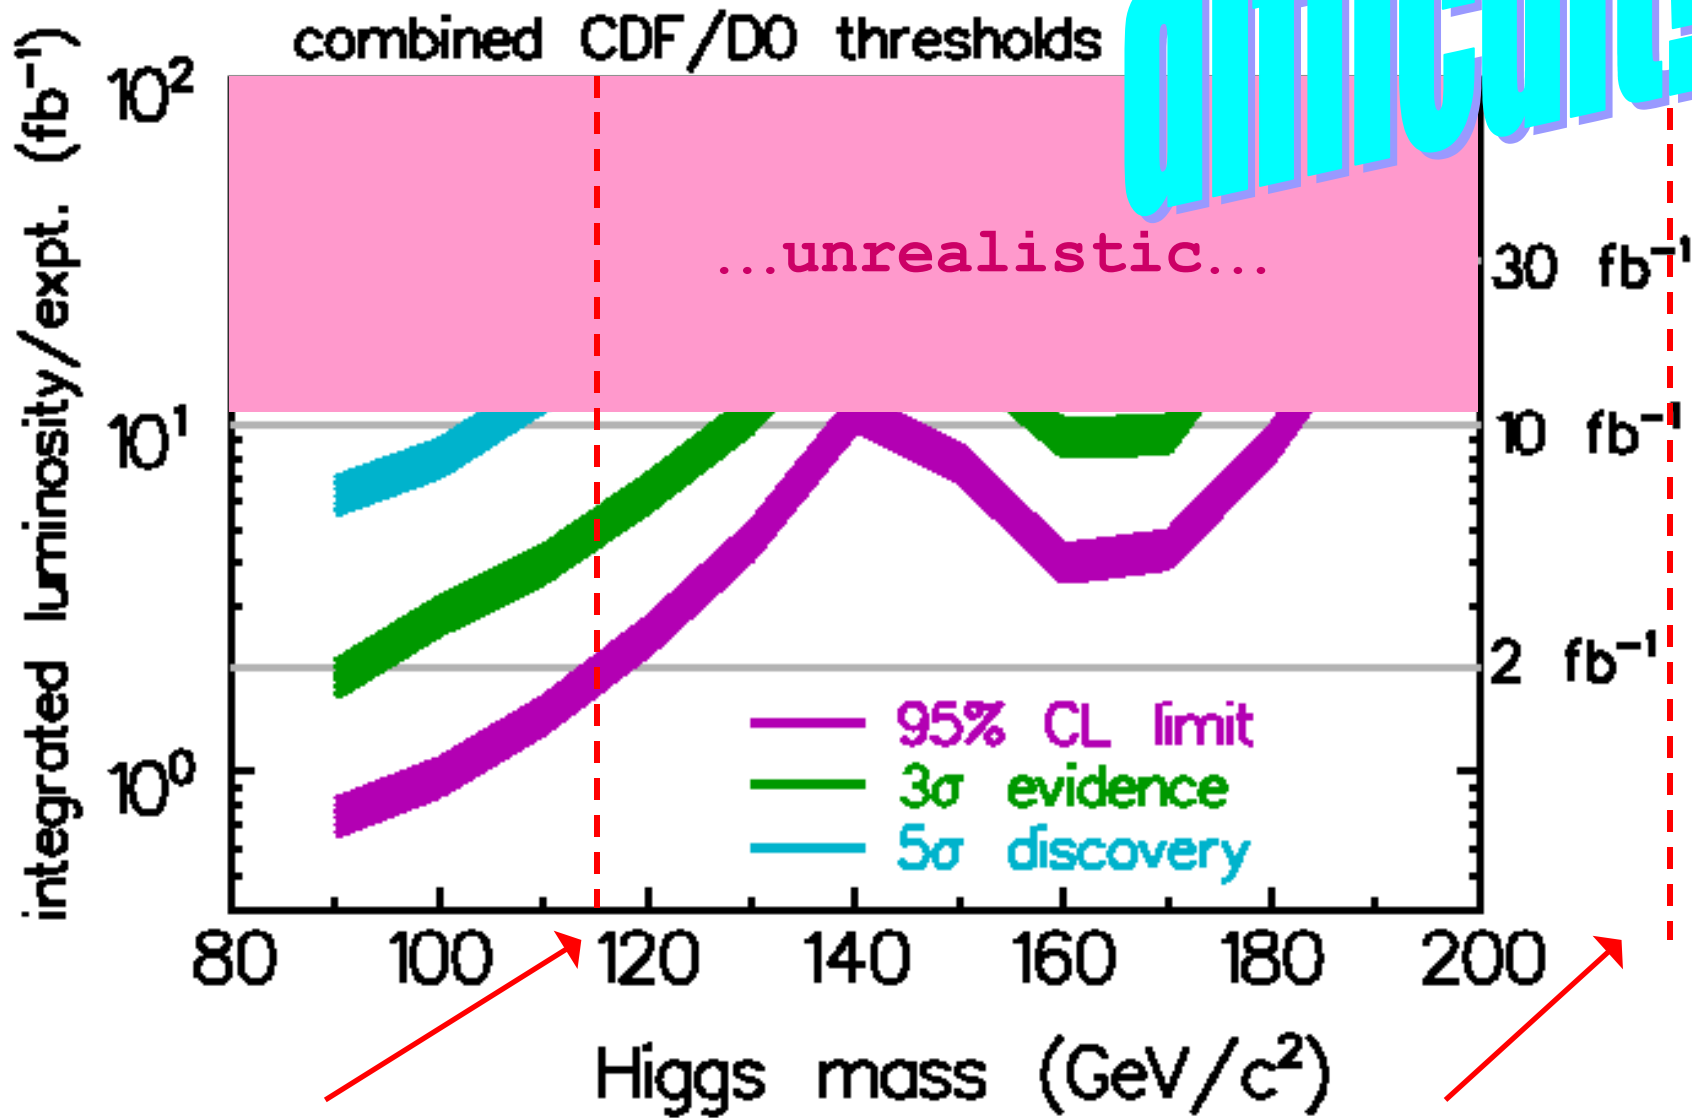

Higgs (130-700 GeV) \rightarrow Z Z^(*) [14 TeV]

Background: $ZZ^{(*)}, Z\lambda^{(*)}$

Higgs discovery prospects at Tevatron

LEP limit 114 GeV

limit 219 GeV

Higgs discovery prospects at LHC

yes!

**experimentum
crucis:**

if SM Higgs exists
↔
it can/will be seen

Extended Higgs Models - Supersymmetry

Minimal SuSy = MSSM:

$$\begin{pmatrix} H_u^+ \\ H_u^0 \end{pmatrix}$$

couples to
up-fermions

$$\begin{pmatrix} H_d^+ \\ H_d^0 \end{pmatrix}$$

couples to
down-fermions

8 real fields - 3 (W^+ W^- Z) = 5 higgs bosons:

h

H

A

H^+ H^-

CP odd

mass relations (lowest order):

$$m_h < m_Z < m_H$$

$$m_h < m_A$$

$$m_W < m_{H^\pm}$$

$$m_h < 130 \text{ GeV} \quad \text{incl. radiative corrections}$$

MSSM Higgs Limits LEP

In addition:
limits on
charged
higgses...

$$\tan\beta > 2.4$$

MSSM Higgs Masses

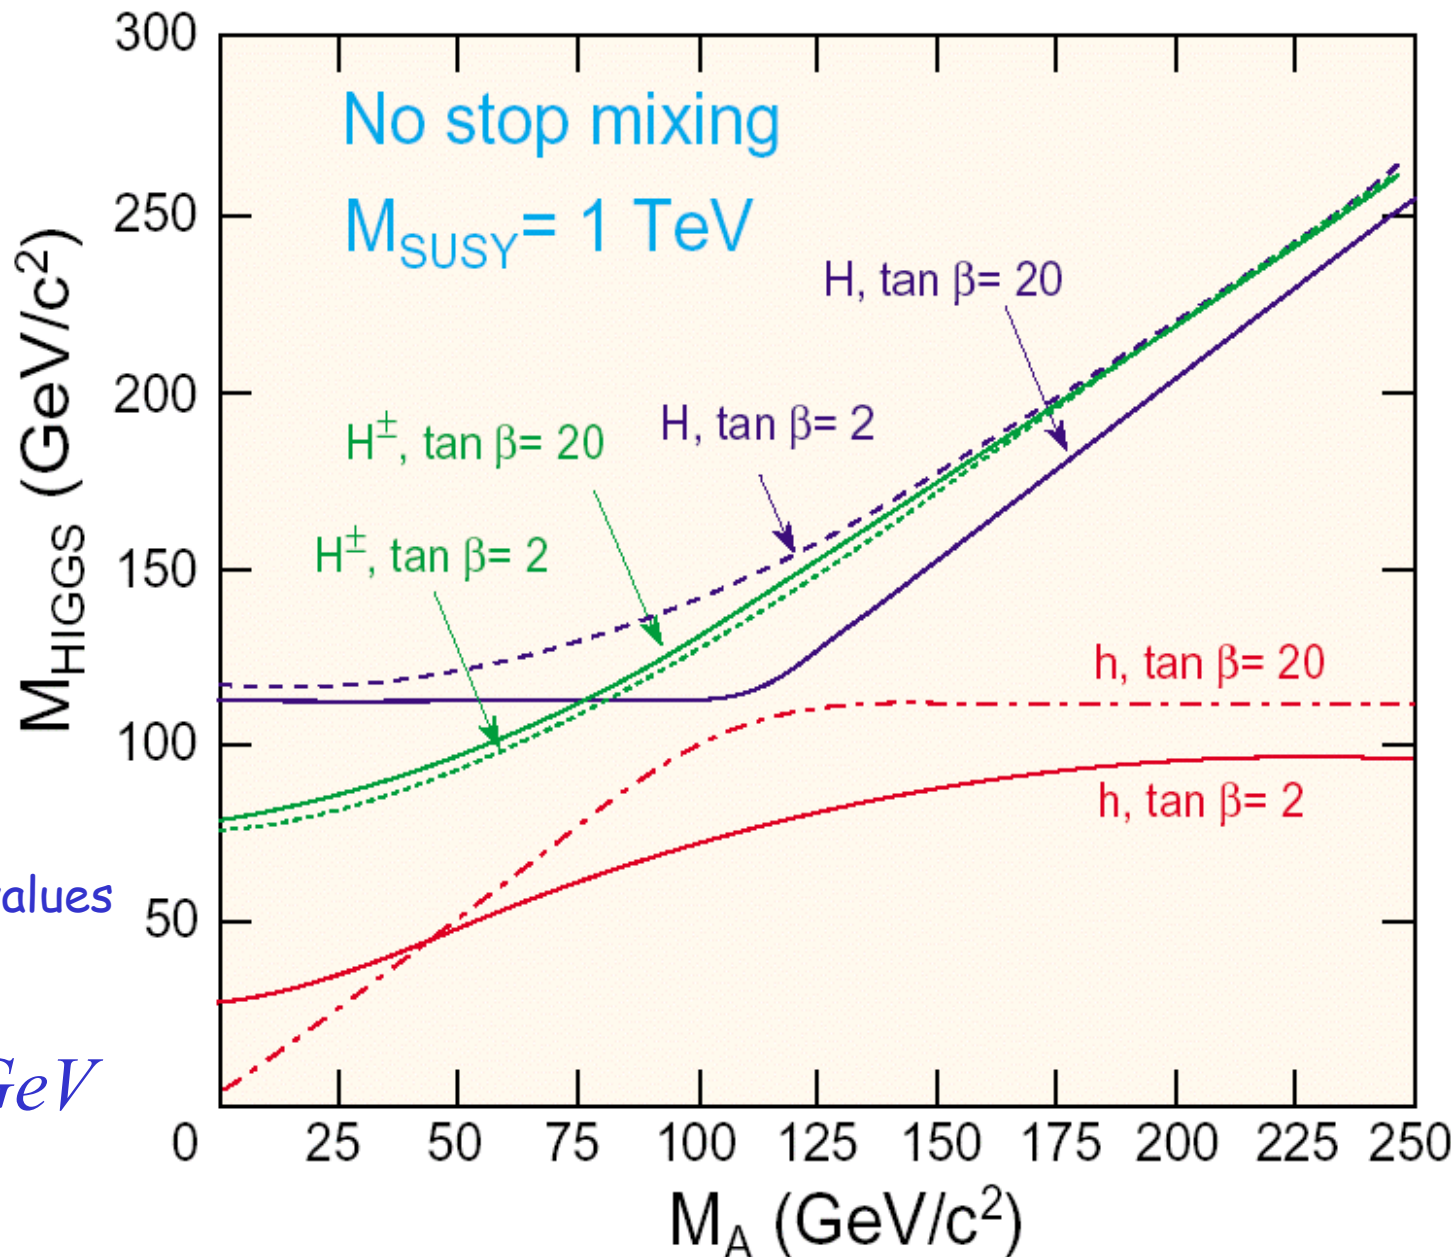

All higgs masses fixed by two parameters:

$$\tan \beta = \frac{v_u}{v_d}$$

= vacuum expect. values

$$m_A = 90 \dots 500 \text{ GeV}$$

$$\tan \beta = 1 \dots 50$$

MSSM Higgs Couplings

also fixed by $m_A, \tan \beta$!

in particular h, H :

$$\begin{pmatrix} h \\ H \end{pmatrix} = \begin{pmatrix} \cos \alpha & -\sin \alpha \\ \sin \alpha & \cos \alpha \end{pmatrix} \begin{pmatrix} H_u^0 \\ H_d^0 \end{pmatrix}$$

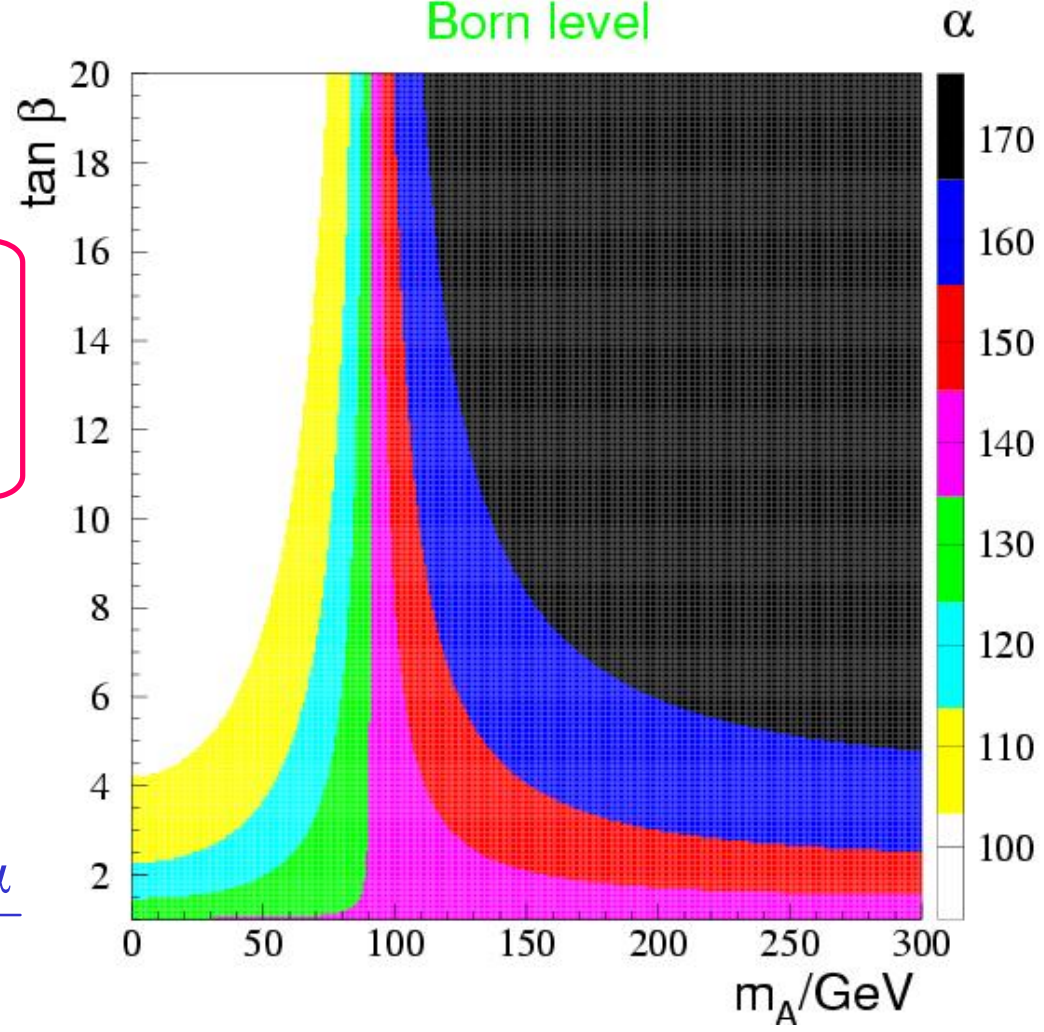

$$uu h \sim \frac{m_u \cos \alpha}{\sin \beta}$$

$$dd h \sim \frac{m_d \sin \alpha}{\cos \beta}$$

$$uu H \sim \frac{m_u \sin \alpha}{\sin \beta}$$

$$dd H \sim \frac{m_d \cos \alpha}{\cos \beta}$$

Born level

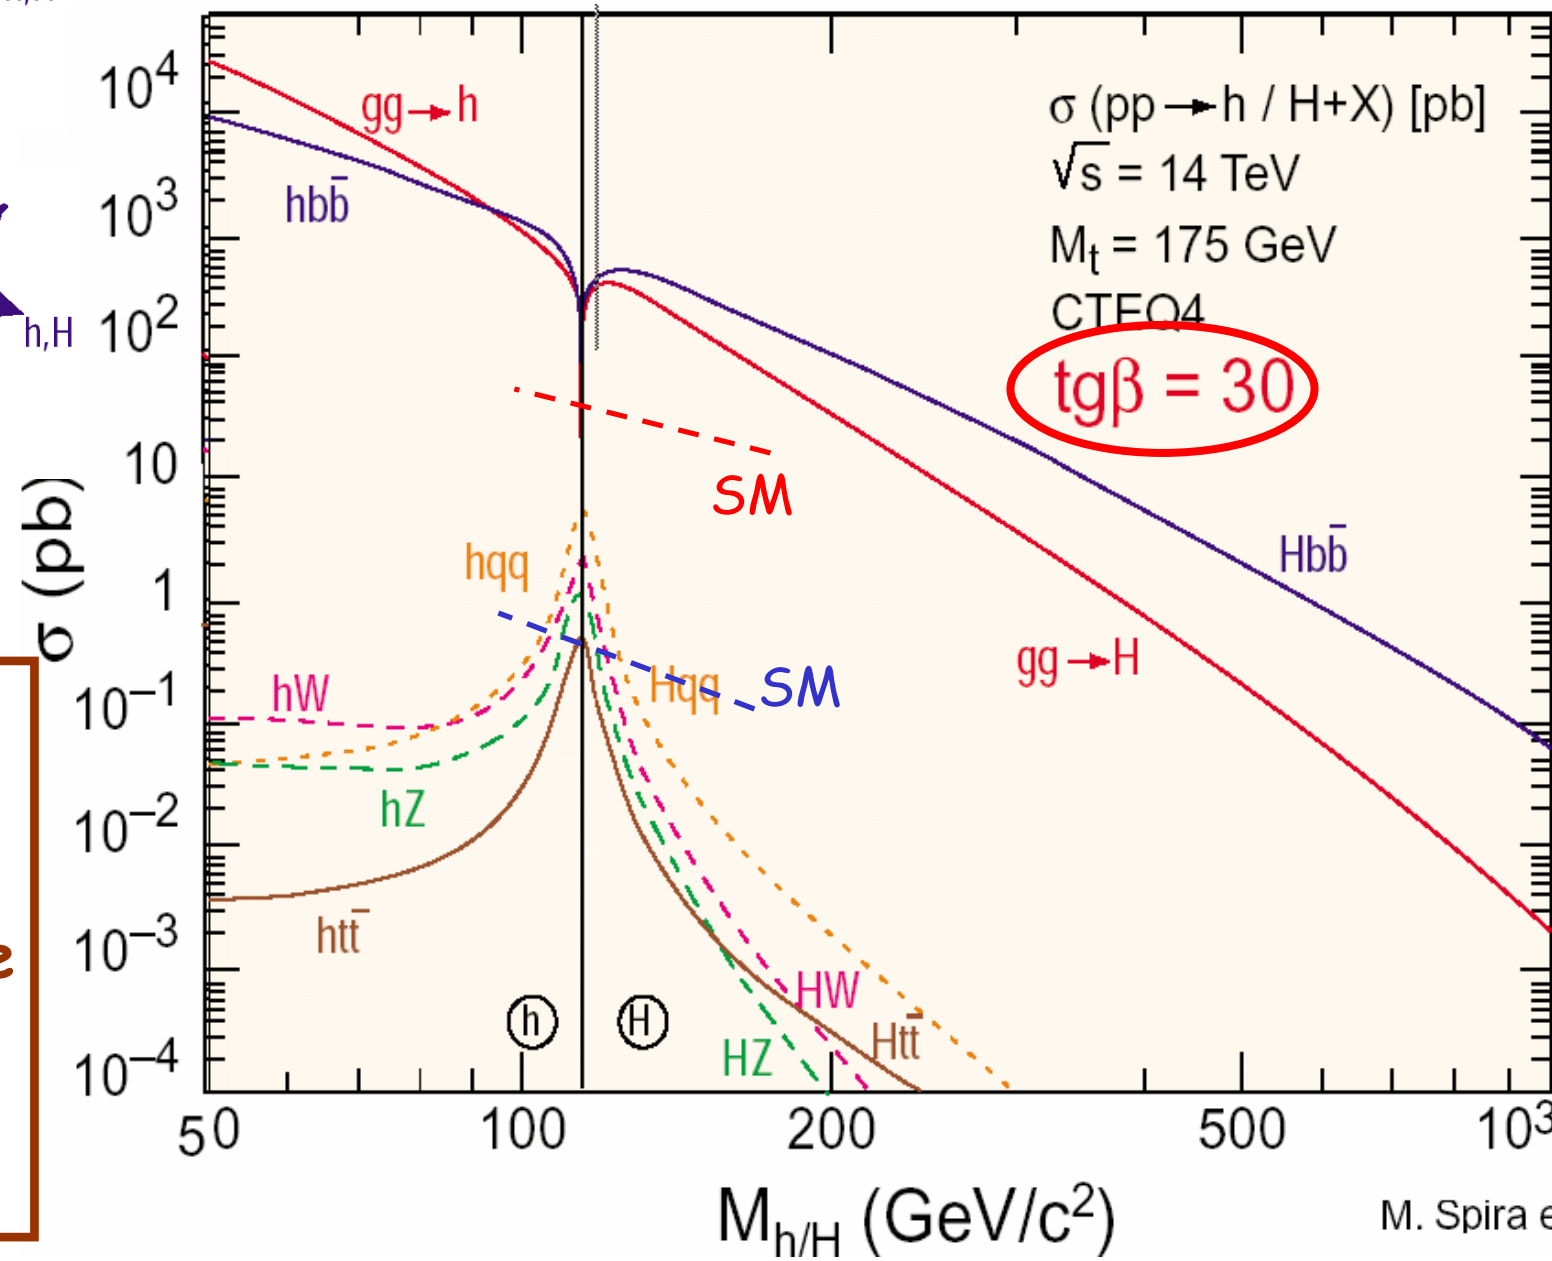

For large $\tan \beta$ coupling $h, H \leftrightarrow bb$ very large ! (similar for A)

MSSM Higgs Xsections

**some
xsections
very large
compared
to SM !**

MSSM Higgs Search LHC

Many channels:

- charged Higgs H^+, H^-
- if $\tan \beta$ small, h decay signatures \sim SM
- if $\tan \beta$ large, „down“ fermions preferred
- `cascade decays`
eg $A \rightarrow Zh$
- if sparticles light:
eg $H \rightarrow \chi^0 \chi^0$
 $H^+ \rightarrow \chi^+ \chi^0$

Charged Higgses

a) $m_{H^\pm} < m_t$

$gg \rightarrow tt$

$t \rightarrow bH$

$H \rightarrow \tau\nu$

b) $m_{H^\pm} > m_t$

$H \rightarrow tb$

MSSM Higgs Discovery at LHC ?

- 4 Higgs observable
- 3 Higgs observable
- 2 Higgs observable
- 1 Higgs observable

5 σ contours

whole region covered!

Higgses cant escape !

Part I Introduction

Part II Standard Model Physics

Part III Higgs
